

W-40 Thermal Printer

A „real“ voucher out of the vest pocket – and that wireless!

With its dimensions of 138 x 88.5 x 45.2 mm this printer vanishes truly into the vest pocket – if you want to. Otherwise you may add it to any equipment or integrate it to other designs.

This applies to fields of applications as measurement, analysis, mobile computing, flexible solutions in the retail-, transportation and logistics as well as electromedical devices and services or housekeeping and healthcare organisations.

Quiet, sturdy, maintenancefree and light weighted – but with a high printing capacity. One hour continuous printing with a fully charged battery! The paperwidth is 112 mm, printing resolution is 8 dots/mm, the printingspeed is 40 mm/sec at a MTBF of 50 km printing. The maximum paperdiameter is 38 mm which equals 18 m of paperlength.

Basically the printer has a RS-232 interface (optional USB) and for the wireless communication electively IrDA 1.0 or Bluetooth 1.1. Therewith the printer can be easily managed by laptops, PDA´s and Palm´s with drivers in conformity with the interface as well as cellular phones.

With this printer its a short way to the concrete mobile office solution!

Another add-on: The W-40 has a built-in label recognition and can handle (easy) label applications.

Almost self evident is the “easy-paper-loading” – feature where no paper has to be threaded through. As a matter of course WOOSIM´s scope of supply is a RS-232 interface cable as well as a powersupply added to the printer.

Drivers for the most usual applications are available.
